PROJECTS

Stochastic Load Balancing for Virtual Resource Management in Data Centers

Technologies: ASP.NET, C#, SQL Server, HTML, CSS

- Developed a resource management system for data centers to optimize virtual machine allocation and workload distribution.
- Implemented a stochastic load-balancing algorithm to enhance resource utilization and reduce server congestion.
- Built a simulation environment to evaluate workload balancing strategies and improve system performance.
- Enhanced scalability and operational efficiency through optimized CPU and memory resource allocation.

Railway Booking System

Technologies: ASP.NET, C#, SQL Server, HTML, CSS

- Developed a web-based railway reservation system for ticket booking, cancellation, and train search operations.
- Implemented seat management and booking validation mechanisms to maintain data integrity and prevent duplicate bookings.
- Integrated SQL Server database for efficient storage and retrieval of booking information.

- Designed responsive user interfaces and backend functionalities to provide a seamless booking experience.
